Color Wheel Value Perspective Drawing – Objective: Students will create a color wheel using one point perspective, accurate color placement, and color values.

Students: My job for this project is to create a Perspective City Color Wheel using one-point perspective and all 12 colors of the color wheel and their values, in their correct placements on the color wheel. By the end of this project, I will have created a unique one-point perspective drawing of a city with building details and designs, a usable color wheel of all the primary, secondary, and tertiary colors and their values, and completed my drawing with a “sky” that ties it all together into one cohesive image.

Language Objective: Students will discuss their ...*building drawings (perspective accuracy) *color placements *color creations *color values ...with their table partners and provide each other with useful and specific feedback that they will then use to make revisions and refinements to their work before turning in.
